Binary Search Cards

Version 4: Numbers 1 to 32

In order on 4 by 8 Cards

Procedure:

Place the base card on the desk student with the numbers facing up and ask a student to think of a number on the base card. Have the student tell a friend the number or have them write it down on a piece of paper without you looking at the number.

Hand the student a second card (it does not matter which one you use after the first card). Have them look on either side of the card to find their number and then place that side of the card with the number they selected facing on top of the first card. Do the same thing with the last two cards.

Pick up the entire stack of cards. Look closely at the numbers. One of them is a number on the base card. All the other numbers you see are on the hole cards. The number visible on the base card is their number. Announce their number! Have them state you predicted their number. If there is a question have the student show the number they wrote down or have the friend verify the number is correct if they told a friend.

Preparation:

Print out the 5 pairs of cards on the next 5 pages (pages 3 to 7). For each page cut out the 2 cards along the outside gray borders. Glue Cards 1A and 1B together back to back with the numbers facing out. Card 1B will need to be rotated 180 degrees so that the cut out areas match on the front and back. Do the same for Cards 2A and 2B.

Glue Cards 3A and 3B together back to back with the numbers facing out. The numbers on the front and back will both face up and the cutout areas will match on both sides. Do the same for Cards 4A-4B, and 5A-5B

Cut out the inside white areas labeled “**cut out**” on each of the 5 glued cards. There are many ways to cut out the inside areas labeled **cut out** without bending the cards. The safest way I have found is to use a hand held paper hole punch. I punch 3 holes next to each other inside the cutout area and then use a scissors to carefully cut out the rectangles.

Print the base card on page 8. A second base card with a different color is provided. When you first practice the trick this card makes it easier to see the number on the base card at the end of the trick. The regular base card works better when performing the actual trick

If you have a printer that supports printing on both sides you can save time. Print the templates on the pages 10 to 13 using the **print on two sides** option in the print command box. You may need to open a dialog box to find this option. You will get the 5 cards already in the correct orientation with a front and back. Cut out the four cards along the outside gray border. Do not cut out the gray borders. Cut out the inside white areas labeled **cut out**. Print the base card on page 14.

1A

	Cut Out								
	1	2	3	4	5	<u>6</u>	7		8
	<u>9</u>	10	11	12	13	14	15		16

Cut out these two cards.

Use a glue stick to glue the cards back to back. The numbers on the back side will be upside down compared to the front side so that the cut out areas match.

After you have glued the cards together cut out the areas labeled "cut out"

1B

	17	18	19	20	21	22	23	24	
	25	26	27	28	29	30	31	32	
	Cut Out								

2A

	<u>9</u>	10	11	12	13	14	15	16	
	Cut Out								
	25	26	27	28	29	30	31	32	
	Cut Out								

Cut out these two cards.

Use a glue stick to glue the cards back to back. The numbers on the back side will be upside down compared to the front side so that the cut out areas match.

After you have glued the cards together cut out the areas labeled "cut out"

2B

	Cut Out
